

BioCard

ColorID is pleased to introduce its new, environmentally friendly, *Bio-Card*. This card is 100% biodegradable. When this card is discarded in a fertile environment it will begin biodegrade over a relatively short period. We believe that our *Bio-Card* is the most biodegradable CR80 plastic card available today. Our *Bio-Card* has the following unique characteristics and features:

- **FASTER BREAKDOWN** – The discarded *Bio-Card* will break down faster than other green cards. It is estimated that the *Bio-Card* will start to biodegrade within 9 months after discarding in a fertile environment. The *Bio-Card* will break down in landfills, composts (commercial or home), rivers, waterways, the ocean or other fertile environments where active organisms are present.
- **DURABLE – DURABLE** The *Bio-Card* has the same durable performance characteristics of the standard PVC plastic cards. The *Bio-Card* is more durable than other green CR80 cards on the market.
- **TESTED** -- Testing from several separate sources and end users have confirmed the ability of this card to biodegrade quickly and successfully.
- **CARD OPTIONS**-- Bio-Cards are available in a multitude of color options including: All popular card colors from ColorID, Clear, Fluorescents and Transparents.
- **CUSTOM PRE-PRINTED Bio-Cards**-- We have numerous customers who are currently using Bio-Cards for their Pre-Printed cardstock. If you are interested in a quote for Pre-Printed Cardstock, contact ColorID today in our QuickQuote section here = www.ColorID.com/qq
