

SAFE Enterprise

Reduce the costs and risks in managing physical access of your employees, contractors, tenants and visitors.

SAFE Enterprise is off-the-shelf software that enables organizations to manage identities – employees, contractors, tenants, and visitors – and their access across physical access systems. SAFE Enterprise solves the key identity management challenges organizations face – onboarding and badging, visitor management, access management, and compliance.

As software that breaks down traditional organizational silos, SAFE Enterprise not only advances the security function, it also transforms the communities of stakeholders involved in identity management. This includes, employees, contractors and visitors as well as process managers in HR, IT, Facilities, Reception and Contractor Administration.

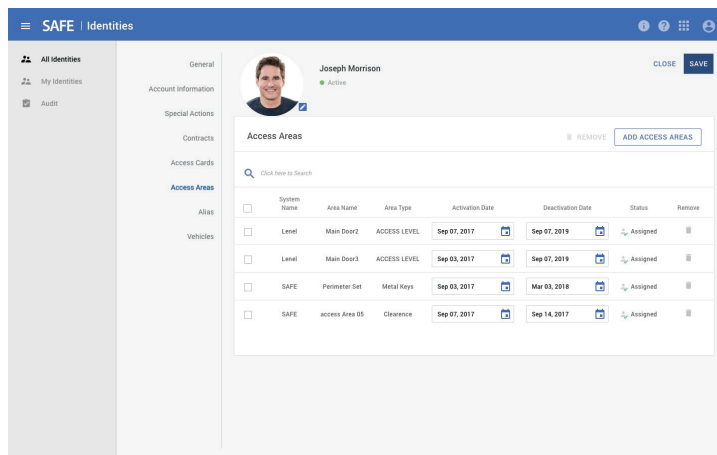

FEATURES

SAFE Enterprise provides a comprehensive range of functions, including:

- > Utilizes pre-defined rules and workflows for on-/off-boarding of identities, access provisioning/de-provisioning and access change management
- > Allows users to manage various details of a physical identity including access card information, biographic and biometric details, results of security checks and logs of historical access usage
- > Allows users to create spatial hierarchy of locations (sites), the underlying buildings, floors and associated areas for better access management
- > Provides a central location to search and assign access levels for an identity across disparate PACS and specify details such as time schedule of access (24x7, business hours)
- > Enables employees to make multiple physical security requests such as new physical access requests and badge requests using a self-service portal
- > Aggregates access level information from disparate PACS and allows users to manage additional details typically not available in PACS, such as risk level, area owner, multiple approvers and pre-requisites for access (such as training for critical areas)
- > Allows creation of access profiles, which automate assigning of physical access using common attributes of identities such as role, location and department.
- > Allows authorized personnel to immediately terminate physical access of identities, using urgent termination, avoiding delays of terminations by HR personnel
- > Maintains a complete audit trail of all transactions executed within the system and between SAFE Enterprise and external systems
- > Delivers pre-defined reports based on access records and logs of identities for compliance reporting and security planning

KEY BENEFITS

- > Reduce operating costs through automation of employee-based PIAM processes
- > Gain complete control by centrally managing employees and their physical access across disparate PACS
- > Minimize risks associated with manual enforcement of policies related to access provisioning and de-provisioning
- > Minimize delays in on-/off-boarding identities and their physical access in PACS

KEY MODULES

SAFE Enterprise features the following modules:

Advanced Access Manager

Streamlines, central management of the physical access lifecycle for an organization's employees, contractors, and tenant identities. Delegated access allows key stakeholders to use admin functions such as onboarding, document gathering and processing approvals. The self-service portal enables individuals to request access and maintain their profile.

Badge Manager

Provides a platform to capture data from external identity sources and pre-load identity information, and capture badging prerequisites prior to printing a badge. Customers have the ability to design, create and print employee badges. It also allows identities to request temporary and new badges.

Visitor Manager

Securely and quickly manages the entire visitor lifecycle from easy pre-registration to welcoming visitor invitations through rapid check-in and checkout. Designed with the enterprise in mind, SAFE Visitor Manager is able to scale from small offices with unattended stand-alone kiosks to corporate headquarters with busy lobby teams.

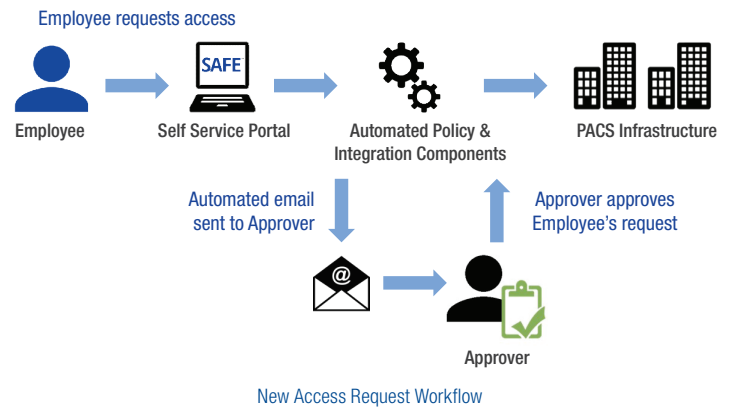

Security Reporter & Operations Analytics

Assembles a comprehensive set of reports that assist you in understanding and managing all of the activity in on-boarding and badging, access management and visitor management. It includes status, activity monitoring, diagnostics and compliance.

SAFE ENTERPRISE AND COMPLIANCE

Compliance functionality within SAFE Enterprise centers around three activities: system logs, reports, and audits.

- > All SAFE Enterprise modules record every access request and approval within the system, creating a complete record of access
- > Who, what, where and why reports provide the ability to determine who is granted access, where, why, for how long and who authorized access for any area – from a data center down to a single door

PART OF SAFE PHYSICAL IDENTITY MANAGEMENT FAMILY OF PRODUCTS

Along with SAFE Enterprise, the family includes:

- > SAFE Visitor Manager
- > SAFE Custom
